

Rugby Stadium Data Logger Snapshots Pre & Post H2O Intervention

Prior to H2O intervention at the Rugby Stadium, the site had a **constant overnight water flow of approximately 1.6m³ per hour (1,600 litres)** equating to an **unaccounted excess cost of £109.44 per day** and over the course of one year, an excess cost to the Rugby Stadium of **£39,945.60**.

After a thorough site survey was carried out by H2O Building Services and the necessary remedial action taken, the **constant flow reduced from 1.6m³ per hour to 0.6m³ per hour** which is an **imminent financial saving to site of £68.40 per day** and an **annual saving of £24,966**.
