

# TRADE EFFLUENT

## WHAT IS TRADE EFFLUENT?

Trade effluent is any liquid waste (effluent) other than surface water and domestic sewerage that is discharged from premises being used for a business, trade or industrial process.

Trade effluent can come from both large and small premises including businesses such as car washes and laundrettes.

## THE FIRST STEP IS TO ACCURATELY MONITOR WHAT YOU ARE DISCHARGING

We are achieving savings of 30% to 60% – see how much you can save, pick up the phone using the number below or email [info@h2obuildingservices.co.uk](mailto:info@h2obuildingservices.co.uk)

## TRADE EFFLUENT SERVICES

As trade effluent and waste water cost reduction experts our top priorities are: –

- To ensure your business meets fully with its legal obligations.
- To comply with your trade effluent discharge consent.
- Helping you save money on your trade effluent MOGDEN charges and mains water charges.

Accurate monitoring will ensure your business is paying only what is actually being discharged in terms of content and volume and not estimates more often than not in the favour of the sewerage company.

$v/(hl)$

THE MOGDEN FORMULA IS USED BY SEWERAGE COMPANIES TO CALCULATE CHARGES

## APPLICABLE TO YOUR TRADE EFFLUENT DISCHARGE.

There are a number of elements that make up the formula that charges per unit of trade effluent.

You will have to agree this is a long and complicated formula, the bits that we are most interested in are those that can be controlled and therefore help you to reduce your trade effluent bills.

They are volume (V), chemical oxygen demand (COD), (OT) and suspended solids (SS) (ST).

Share:

GET THAT RIGHT AND THIS IS WHERE OUR EXPERTISE REALLY KICKS IN!

We will then work with you to reduce trade effluent

discharge volume COD and suspended solids. Our team of experts can help you to optimise any existing trade effluent treatment systems or design, build, maintain and operate effluent treatment systems to reduce effluent costs and ensure trade effluent discharge consent compliance.

We apply a wholly scientific approach to projects of all sizes from initial consultancy, design, and installation and waste water management services nationwide, and with over 15 years' experience.
