

# WATER LEAK REPAIRS

AT H2O, WE BELIEVE IN PERFORMING QUALITY WATER LEAK REPAIRS THAT WILL LAST.

If we detect a water leak<sup>1</sup> on your premises, we will advise you of the most cost effective, least intrusive way to carry out a full, lasting repair – not a patch up job which will only lead to more disruption and expense further down the line.

What is more, we will check to make sure your entire premises is watertight, and even seek a refund for any waste water costs incurred due to a leak.

Water leaks can cost your business **thousands of pounds** and are often **difficult to deal with.**

An underground leak<sup>2</sup>, for example, will require very precise detection, followed by an excavation to get to the leak before a repair can be carried out.

## THE WATER LEAK REPAIR PROCESS

Prior to carrying out an investigation into a suspected

water leak, we will usually conduct a water audit, starting with a full analysis of water bills over the past 12 months or more.

By looking for spikes in water usage and waste water management charges, we will usually be able to tell if there is a leak at the property, and if so, how severe it is.

Subject to the client's approval, we will then carry out leak detection across your entire site to locate all water leaks that could be costing your business money. Upon completion, we will send you a report of the findings along with costs for repair. In most instances, we will quantify the water losses and report the monetary value.

Should you wish us to carry out the work, we will happily excavate, repair faulty pipe work and reinstate all surfaces that have been disturbed.

**We pride ourselves on leaving your site looking untouched!**

## AFTERCARE

H2O is proud to bring a unique aftercare service to

the water industry. With Automated Meter Reading (AMR)<sup>4</sup>, a new water monitoring technology, we can track hourly the water consumption of your business.

If there is a significant increase in consumption, **an alarm will be triggered at our control centre,**

which we can pass directly onto you for action, and arrange repairs if required.

The technology can be installed easily on your site and will be completely owned by you, lasting 10 years before it needs to be replaced. We simply offer you our expert knowledge for installation and monitoring.

## LEAK REPAIR EXPERTS

With more than 30 years' experience<sup>3</sup> in water

engineering services at our disposal, H2O can offer more expertise in water leak detection and repair than most of our competitors can claim.

If you're looking for

**peace of mind**

that the water leak repair process will be handled quickly, cleanly and with top professional quality, then we are the specialists for you.
